

Abu hafiz supermarket again!!!

Input file: standard input
Output file: standard output
Time limit: 1 second
Memory limit: 256 megabytes

Abu Hafiz wants to buy some items for his supermarket. Their total cost is equal to N . However, the sales representative offered him a discount plan to reduce the cost to a value less than or equal to P coins instead of N . To get the discount plan, the sales representative challenged him to play a game. Abuhafiz plays the game for X days. On day 1, he got a 1-coin discount; on day 2, a 2-coin discount; on day 3, a 3-coin discount, and so on.

Your task is to help Abuhafiz find the number X , which represents the minimum number of days that Abuhafiz needs to play the game to get those items with a total price less than or equal to p instead of n . .

Example:

suppose $n = 10$, $p = 8$. Then he can play the game for 2 days. and will get a $1 + 2$ discount. So $10 - (1 + 2) = 7$, which is less than or equal to p , and the number of days is the minimum.

Input

You will be given two numbers n and p ($1 \leq n \leq 1275$) ($1 \leq p \leq n$) the original price and price after discount.

Output

output a single integer X , the minimum number of days that Abuhafiz needs to play the game to get the items with a price less than or equal to P .

Example

standard input	standard output
10 8	2
