

BMI Calculator

Input file: **standard input**
Output file: **standard output**
Time limit: 1 second
Memory limit: 256 megabytes

Moheeb joined a health club. Before starting his training, the coach asked him to calculate his Body Mass Index.

The Body Mass Index is calculated using the formula:

$$\text{BMI} = \frac{w}{h \times h} \times 10000$$

print exactly five decimal places of the BMI.

Input

The only line contains two integers w and h ($30 \leq w \leq 200$, $100 \leq h \leq 250$) — Moheeb's weight in kilograms and height in centimeters, respectively.

Output

Print a single integer — the calculated **BMI**.

Example

standard input	standard output
135 230	25.51985
