

Discount Plan

Input file: `standard input`
Output file: `standard output`
Time limit: 1 second
Memory limit: 256 megabytes

You are given an integer p representing the price of an item.

A discount is applied based on the value of p :

- If $p \geq 1000$, a discount of 20% is applied.
- Otherwise, a discount of 10% is applied.

Your task is to print the final price after applying the discount with **exactly two decimal places**.

Input

The first line contains an integer p ($1 \leq p \leq 10^6$).

Output

Print the final price after applying the discount.

Examples

<code>standard input</code>	<code>standard output</code>
1000	800.00
800	720.00
