

Hussam VS Osama

Input file: **standard input**
Output file: **standard output**
Time limit: 1 second
Memory limit: 256 megabytes

Hussam and Osama are playing an interesting game. There are some hidden coins in a forest. and both players will try to search for them and collect as many coins as they can. Whoever gets a greater sum wins the game.

However, there is a special rule: suppose a coin value equals to x , Hussam can collect it if it's even, while Osama can collect it if it's odd.

Your task is to **determine the winner** of the game or to **print -1** if there is a tie.

Input

First line contains a single number n ($1 \leq n \leq 1000$), the number of the hidden coins. The second line contains n values ($1 \leq n_i \leq 1000$), the values of the coins.

Output

print **"hussam"** or **"osama"** or **-1** if a tie happens.

Examples

standard input	standard output
3 2 1 1	-1
5 3 2 3 1 4	osama
5 2 3 4 6 10	hussam
