Memory limit: 256 megabytes

Khalayleh Team is preparing for the ACPC (**A**rab **C**ollegiate **P**rogramming **C**ontest).

The team consists of **Saad, Yousef, and Mais**, and they are coached by **Assel**.

To prepare for the contest, Assel selected n training problems. Each problem has a **difficulty value**.

Assel considers two problems to form a **balanced pair** if the **sum** of their difficulty values is divisible by a given integer k .

Given the difficulty values of all training problems, determine **how many balanced pairs** exist.

Input

The first line contains two integers n and k ($1 \leq n \leq 1000$, $1 \leq k \leq 100$), representing the number of problems and the divisor.

The second line contains n integers a_i ($0 \leq a_i \leq 10^6$), where a_i is the difficulty value of the i -th problem.

Output

Print a single integer: the number of pairs (i, j) such that:

- $1 \leq i < j \leq n$
- $(a_i + a_j)$ is divisible by k

Examples

standard input	standard output
5 10 10 3 2 1 10	1
6 3 4 2 3 3 6 6	7
