

Pangrammizer

Input file: `standard input`
Output file: `standard output`
Time limit: 1 second
Memory limit: 256 megabytes

You are given a string S of length N . Your task is to print the minimum number of letters to be added to the string to make it **Pangram**.

*

Input

The input consists of two lines: The first line contains a single integer N ($1 \leq N \leq 100$), the length of the string.

The second line is the string S .

Output

Output a single number. The minimum number of letters to be added to the string to make it a pangram string.

Example

standard input	standard output
11 CodeAcademy	19

*A string is called a **pangram** if it contains all the English alphabet letters. A letter is considered exist if it's found in the string, either in the lower case or upper case,
