

Strong Password

Input file: `standard input`
Output file: `standard output`
Time limit: 1 second
Memory limit: 256 megabytes

A password is considered **strong** if it satisfies all of the following conditions:

- Contains at least one lowercase English letter.
- Contains at least one uppercase English letter.
- Contains at least one digit.
- Has a length of at least 8 characters.

Given a password, **determine whether it is strong or not**.

Input

A single string representing the password ($1 \leq |s| \leq 100$), such that $|s|$ means the length of the string.

Output

Print:

- **STRONG** if the password satisfies all conditions.
- **WEAK** otherwise.

Examples

standard input	standard output
C22wdr	WEAK
CodeAcademy	WEAK
