

A Good Digit

Input file: **standard input**
Output file: **standard output**
Time limit: 1 second
Memory limit: 256 megabytes

A digit x in a number y is called **GOOD** if x divides every other digit in y *.

Given a number n determine how many **GOOD** digits it contains.

it is guaranteed that the given numbers do not contain any zero digit

Input

a single integer n ($1 \leq n \leq 10^9$).

Output

Print a single integer: the count of **GOOD** digits in the given number.

Examples

standard input	standard output
1	1
11111	5

*A number x divides a number y if $y \bmod x = 0$.
