

Good After Deletion

Input file: standard input
Output file: standard output
Time limit: 1 second
Memory limit: 256 megabytes

A digit x in a string of digits s is called **GOOD** if it divides every other digit in s ^{*}.

You have one operation: remove one digit (one occurrence of a digit) from s .

Determine whether it is possible to have at least one **GOOD** digit in s after doing the above operation at most once.

it is guaranteed that s does not have any zero digits.

[†]

Input

a single line of input which contains the string of digits s ($1 \leq |s| \leq 10^5$)

Output

Print YES if it is possible to obtain a **GOOD** string after removing at most one occurrence of an element. Otherwise, print NO.

Examples

standard input	standard output
3124	YES
2468	YES
2357	NO

^{*}A number x divides a number y if $y \bmod x = 0$.

[†]the symbol $|S|$ means the length of the variable S
